

Computing

Intent Statement

Our computing curriculum is designed to reflect the key aims of the National Curriculum for Computing and ensures that all pupils become digitally literate and competent at using technology. We want our pupils to become creators, not consumers, and we achieve this by encompassing computer science, information technology and digital literacy within our computing curriculum, equipping our pupils with the knowledge and skills needed to thrive in the digital world. We recognise that the best prevention of many of the issues we see with technology and social media today is a quality education where positive use is modelled. We aim to foster a love for computing and inspire our pupils to become future creators, innovators, and problem-solvers in the digital age.
